

Network Management Research Analyst Intern job description

About the role

As an Network Management Research Analyst Intern you will be part of the Network Management team, responsible for building a new research workflow, utilizing automations and technology, targeting to generate proactive demand for consultations from existing and new clients (primarily Private Equities).

In this role you will be a research analyst, analyzing historical M&As data, identifying target profiles for building proactively our network of experts and creating an internal mapping of profiles, companies and competitors. In this process you will become familiar with multiple tools (e.g. LinkedIn, TexAu) and you will also be introduced in the business logic of M&As (for Private Equities primarily).

Responsibilities

- Conduct research into markets and companies around the globe using networking, social media and internal tools
- Build a database of profiles and companies following specific search filters criteria.
- Maintain high quality work and delivery standards aligned to organizational requirements

Requirements

The ideal candidate would possess:

- Bachelor's degree (or in graduation process)
- Fluency in English
- Excellent verbal and written communication skills
- Commercial acumen and ability to understand diverse value chains
- Ability to work interdependently
- Proficient use of MS Office and Google suite
- Drive to deliver high quality results on a daily basis
